

Calculation skills for Year 1 and 2 have been included so the earlier calculation learning journey is clear.

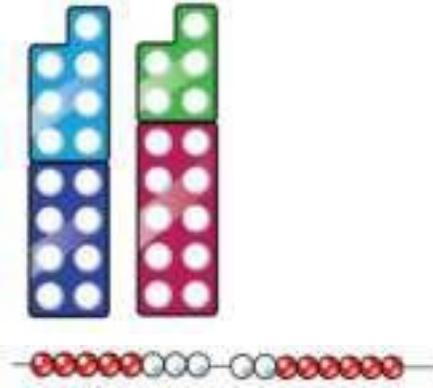

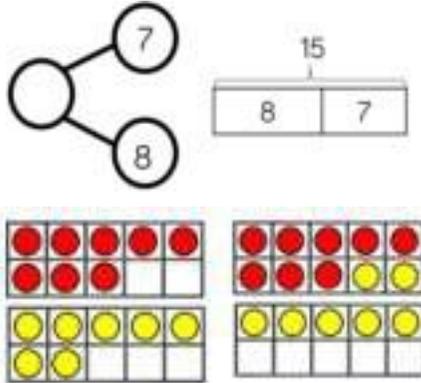

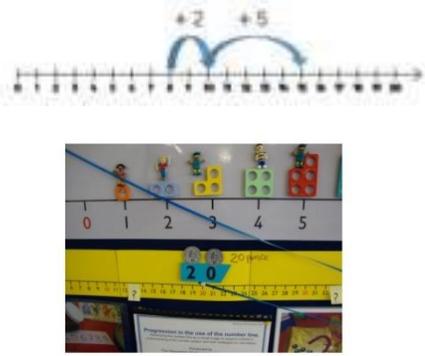

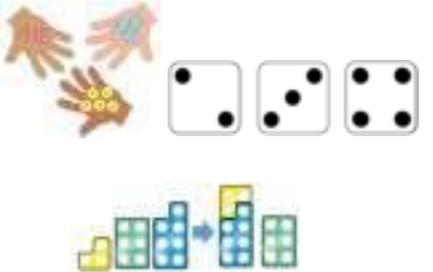

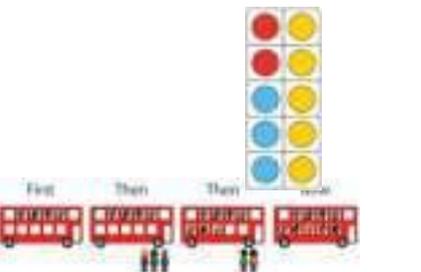

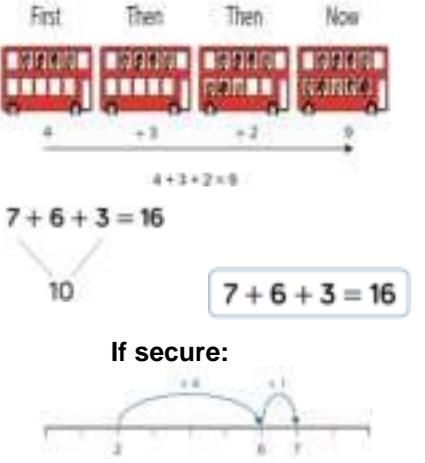

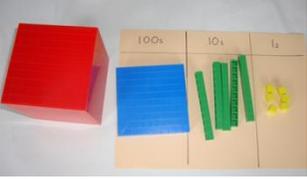

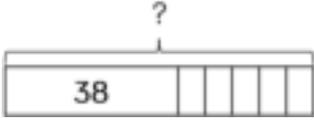

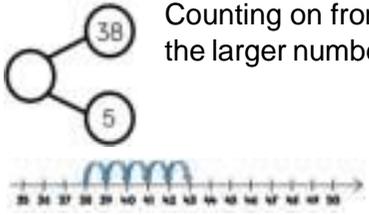

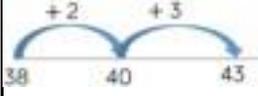

## Addition

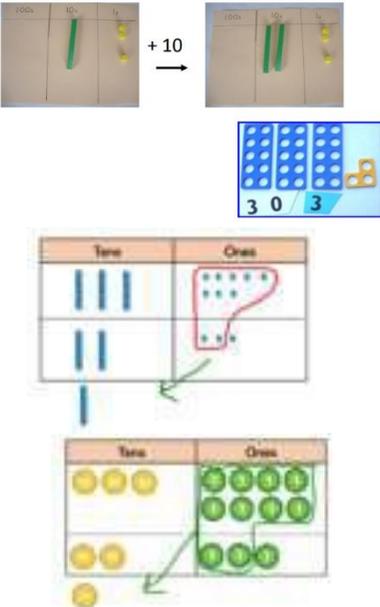

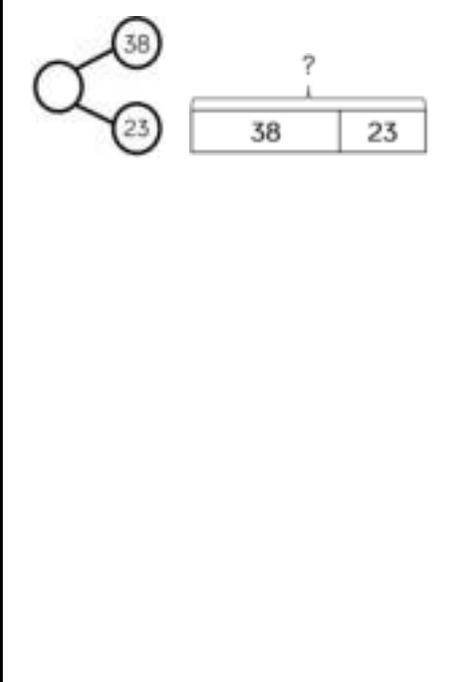

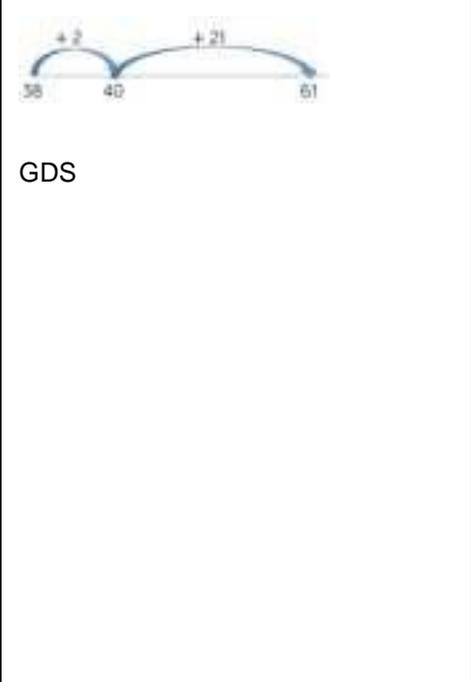

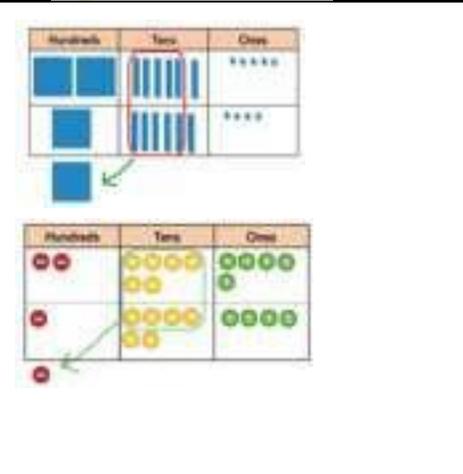

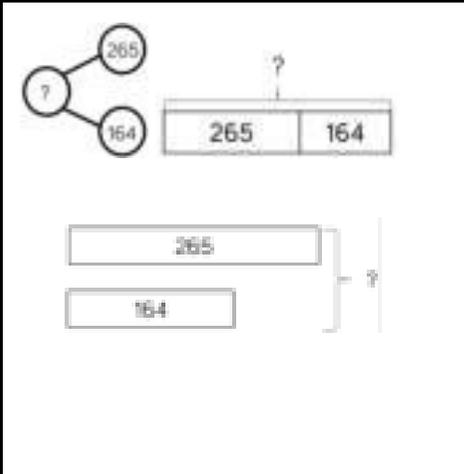

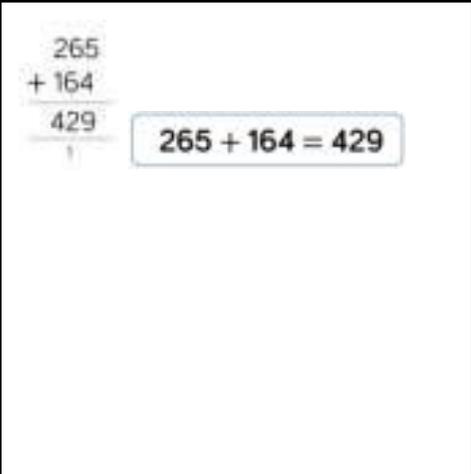

### Key Vocabulary:

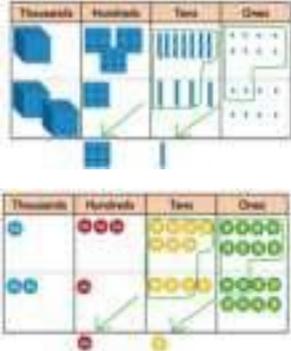

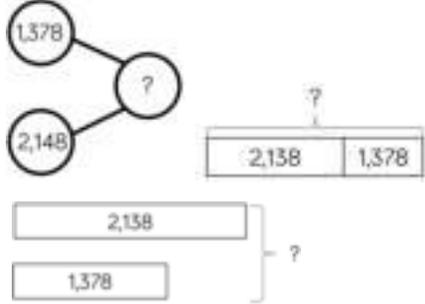

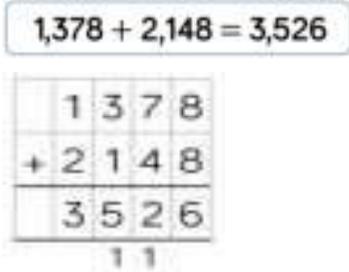

add    increase    total    same as    sum    equal    addition    more    number sentence    altogether    count on    plus    count all

Year Group	Skill	Representations and Models	Concrete The 'doing' stage	Pictorial The 'seeing' stage	Abstract The 'symbolic' stage
1	Add two 1-digit numbers to 10  (aggregation & augmentation)	Part- whole model Bar model Number shapes	<p>(support augmentation)</p>		

1	Add 1 and 2-digit numbers to 20	Part-whole model Bar model Number shapes Ten frames (within 20)			
<b>Year Group</b>	<b>Skill</b>	<b>Representations and Models</b>	<b>Concrete</b> The 'doing' stage	<b>Pictorial</b> The 'seeing' stage	<b>Abstract</b> The 'symbolic' stage
1 and 2	Add three 1-digit numbers (addends)	Part-whole model Bar model			

2	Add 1 and 2-digit numbers to 100	Part-whole model Bar model Number lines (labelled) Straws	 	 <p>Counting on from the larger number</p> 	 <p><b>GDS</b></p> <div style="border: 1px solid black; padding: 5px; display: inline-block;"> <math>38 + 5 = 43</math> </div>

5	Add with up to 3 decimal places	Part- whole model Bar model			$3.65 + 2.41 = 6.06$ $\begin{array}{r} 3.65 \\ + 2.41 \\ \hline 6.06 \\ \small 1 \end{array}$
---	---------------------------------	--------------------------------	--	--	---

## Subtraction

### Key Vocabulary:

subtract	decrease by	reduce	exchange	inverse
less than	distance between	count back/on	take from	difference
take away	deduct	minus	fewer than	

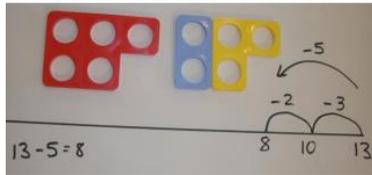

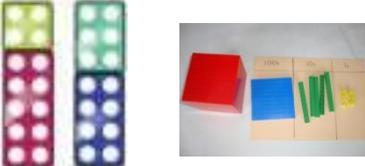

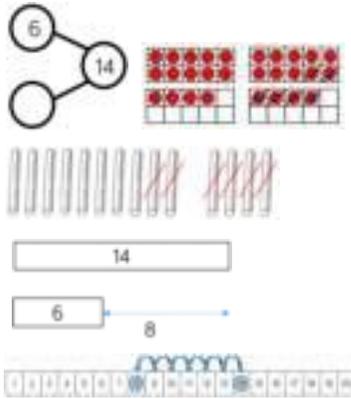

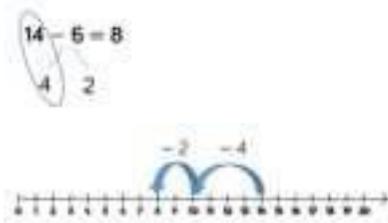

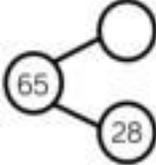

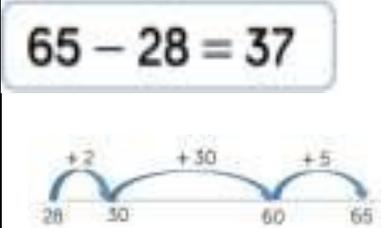

Children need to understand that subtraction is not commutative or associative.

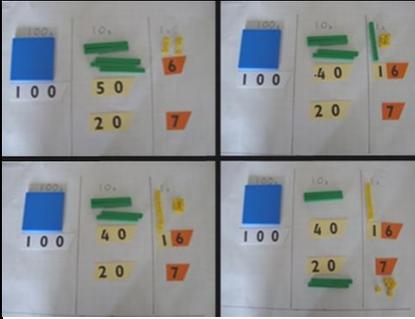

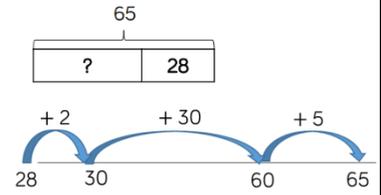

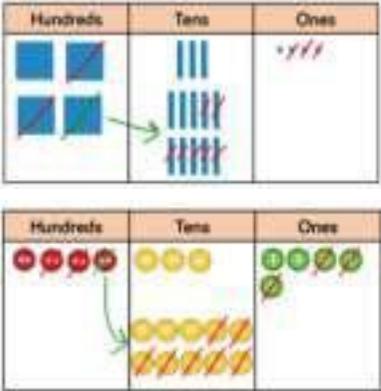

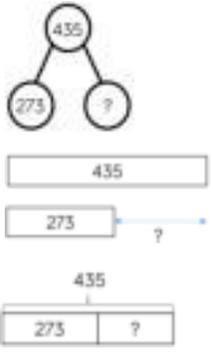

**Partitioning:** Splitting a number into its component parts

**Difference:** The numerical difference between two numbers is found by comparing the quantity in each group

**Reduction:** Subtraction as takeaway

Year Group	Skill	Representations and Models	Concrete	Pictorial	Abstract
1	Subtract two  1-digit numbers to 10	Part-whole model  Bar model Number shapes Ten frames (within 10) Bead string (10)

5	Subtract with up to 3 decimal places	Part-whole model Bar model Base 10			

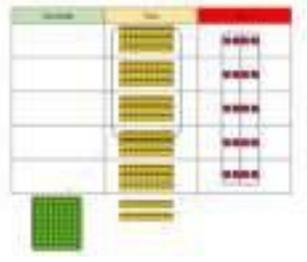

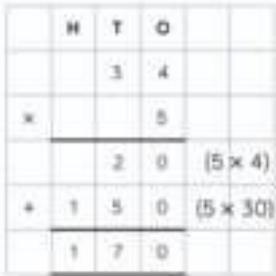

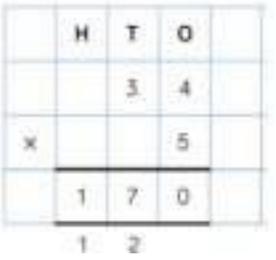

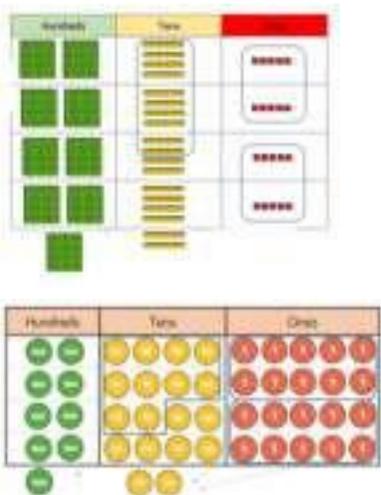

## Multiplication

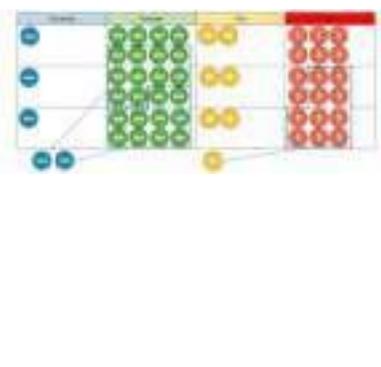

### Key Vocabulary:

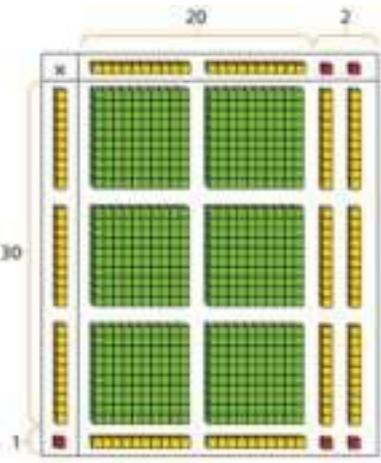

multiply	product	distributive
multiplication	multiple	associative
times	double	
lots of	factors	
groups of	repeated addition	
sets of	Commutative - it can be done both ways.	
halve		

Year Group	Skill	Representations and Models	Concrete	Pictorial	Abstract
1/2	Solve 1-step problems using multiplication	Bar model Number shapes Counters Ten frames Bead strings Number lines  Children represent multiplication as repeated addition in many different ways.		<p>practically making arrays and representing apparatus counting in 3's and 4's.</p>	$5 + 5 + 5 + 5 = 20$ $4 \times 5 = 20$ $5 \times 4 = 20$  <b>Yr 1 - count 2's, 5's and 10's</b>  <div style="border: 1px solid gray; border-radius: 10px; padding: 5px; text-align: center;">                         One bag holds 5 apples.                          How many apples do 4 bags hold?                     </div>  <b>Yr2 – secure counting 2's, 5's, 10's</b> Children are introduced to the multiplication symbol in Year 2.

3/4	Multiply 2-digit by 1-digit numbers	Place value counters Base 10 Short written method Expanded written method			<div style="border: 1px solid black; padding: 5px; display: inline-block;"><math>34 \times 5 = 170</math></div> Expanded column method
			 <p>Place value counters should be used to support understanding of the method rather than supporting the multiplication, as children should use times table knowledge.</p>		 <p>Short multiplication method</p> 

4	Multiply 3-digit by 1-digit numbers	Place value counters Base 10 Short written method			$245 \times 4 = 980$ <table border="1" data-bbox="1601 279 1859 566"> <tr><td></td><td>H</td><td>T</td><td>O</td></tr> <tr><td></td><td>2</td><td>4</td><td>5</td></tr> <tr><td>x</td><td></td><td></td><td>4</td></tr> <tr><td colspan="4"><hr/></td></tr> <tr><td></td><td>9</td><td>8</td><td>0</td></tr> <tr><td></td><td>1</td><td>2</td><td></td></tr> </table> <p>Short formal written method</p>		H	T	O		2	4	5	x			4	<hr/>					9	8	0		1	2

## Division

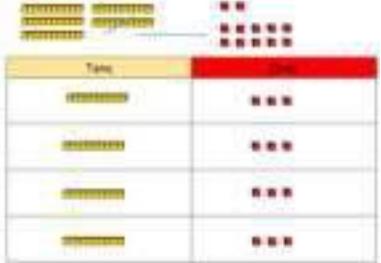

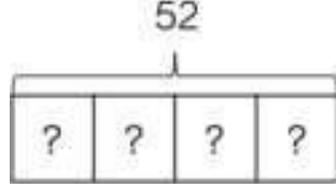

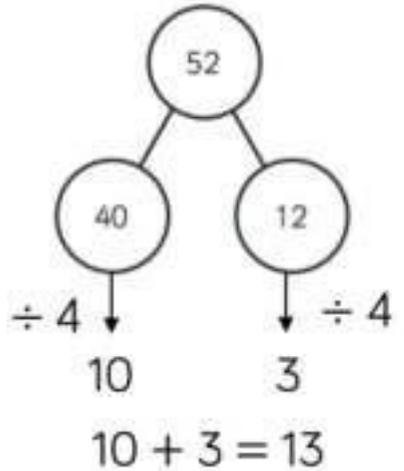

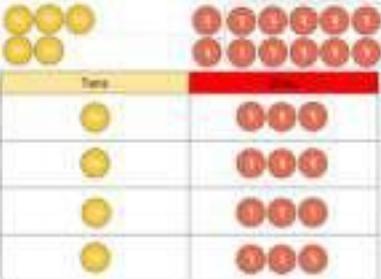

### Key Vocabulary:

Groups	Share	Remainders
Grouping	Sharing	Divisor
Repeated subtraction	Exchange	Array
Quotient	Multiples	

Year Group	Skill	Representations and Models	Concrete	Pictorial	Abstract
1/2	Solve one-step problems with division (sharing)	Bar model Real life objects Arrays Counters	 <p>There are 20 apples altogether. They are shared equally between 5 bags. How many apples are in each bag?</p> <p>Children solve problems by sharing amounts into equal groups</p>		<p>In Year 1, children are not expected to record division formally.</p> <p>In Year 2, children are introduced to the division symbol.</p> 

Year Group	Skill	Representations and Models	Concrete	Pictorial	Abstract
1/2	Solve one-step problems with division (grouping)	Real life objects Number shapes Bead strings Ten frames Number lines Arrays Counters	<p data-bbox="792 284 1173 384">There are 20 apples altogether. They are put in bags of 5. How many bags are there?</p>  <p data-bbox="792 788 1137 900">Children solve problems by grouping and counting the number of groups.</p> <p data-bbox="792 948 1173 1182">They can use concrete representations in fixed groups such as number shapes which helps to show the link between multiplication and division.</p>		 <p data-bbox="1928 453 2114 496"><math>20 \div 5 = 4</math></p> <p data-bbox="1592 612 2092 719">Grouping encourages children to count in multiples and links to repeated subtraction on a number line.</p>

3	Divide 2-digits by 1-digit (no exchange sharing)	Base 10 Bar model Place value counters Part-whole model	 <p>The image shows a base 10 place value chart with 'Tens' and 'Ones' columns. The 'Tens' column has two yellow circles representing 20, and the 'Ones' column has eight red squares representing 8. Below the chart are two circular diagrams showing two yellow sticks (representing 20) and four red squares (representing 8) being divided into two equal groups.</p>		 <p>The diagram shows a part-whole model for 48. A top circle contains '48'. Two lines connect it to two lower circles containing '40' and '8'. Below the '40' circle is an arrow pointing down with '+ 2' next to it, leading to an empty square box. Similarly, below the '8' circle is an arrow pointing down with '+ 2' next to it, leading to another empty square box.</p> <p>Part-whole models can provide children with a clear written method that matches the concrete representation.</p> <div style="border: 1px solid black; border-radius: 15px; padding: 10px; display: inline-block; margin-top: 10px;"> <math>48 \div 2 = 24</math> </div>
3	Divide 2-digits by 1-digit (sharing with exchange)	Straws Base 10 Bar model Place value counters			

		<p>Part-whole model</p>			
			 <p>When dividing numbers involving an exchange, children can use Base 10 and place value counters to exchange on ten for ten ones.</p>		<div style="border: 1px solid black; border-radius: 15px; padding: 10px; text-align: center; margin-bottom: 10px;"> <p><b><math>52 \div 4 = 13</math></b></p> </div> <p>Flexible partitioning in a part-whole method supports this method.</p>

			Children should start with the equipment outside the place value grid before sharing the tens and ones equally between the rows.		
3/4	Divide 2-digits by 1-digit (sharing with remainders)	Straws Base 10 Bar model Place value counters Part-whole model			

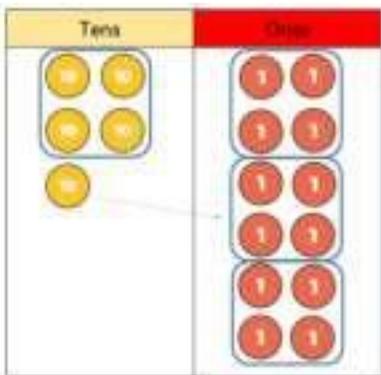

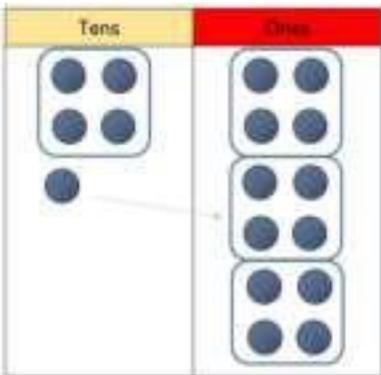

When dividing numbers with remainders, children should use Base 10 and place value counters to exchange one ten for ten ones.

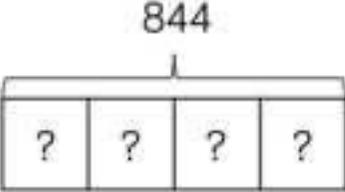

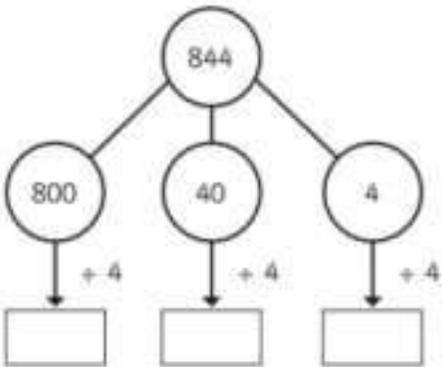

Starting with the equipment outside the place value grid will highlight remainders, as they will be left outside the grid once the equal groups have been made.

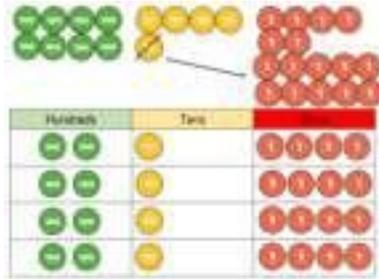

$$53 \div 4 = 13 \text{ r}1$$

Flexible partitioning in a part-whole method supports this method

<p>4/5</p>	<p>Divide 2-digits by 1-digit (grouping)</p>	<p>Base 10 Bar model Place value counters Part-whole model</p>			<div style="border: 1px solid black; border-radius: 15px; padding: 10px; text-align: center; margin-bottom: 10px;"> <math>52 \div 4 = 13</math> </div> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td></td> <td></td> <td>1</td> <td>3</td> <td></td> </tr> <tr> <td></td> <td>4</td> <td style="border-left: 1px solid black;">5</td> <td>12</td> <td></td> </tr> </table> <p>When using the short division method, children use grouping. Starting with the largest place value, they group by the divisor.</p>			1	3			4	5	12	
		1	3												
	4	5	12												

			 <p>Language is important here.          'How many groups of 4 tens can we make?'          'How many groups of 4 ones can we make?'</p> <p>Remainders can also be seen as they are left ungrouped.</p>		
4	Divide 3-digits by 1-digit (sharing with exchange)	Base 10 Bar model Place value counters Part-whole model			

<p>4/5</p>	<p>Divide 3-digits by 1-digit (grouping)</p>	<p>Place value counters Place value grid Written short division</p>	 <p>A place value grid with three columns labeled H (Hundreds), T (Tens), and O (Ones). The H column contains four green counters, the T column contains four yellow counters, and the O column contains four red counters.</p>	 <p>The number 844 is written above a horizontal line. Below the line is a box divided into four equal sections, each containing a question mark (?).</p>	 <p>A tree diagram starting with a circle containing 844. Three lines branch out to three circles containing 800, 40, and 4. Below each of these circles is a downward arrow with '+4' next to it, pointing to an empty rectangular box.</p>
------------	--	---	---	--	---

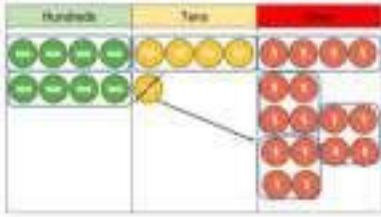

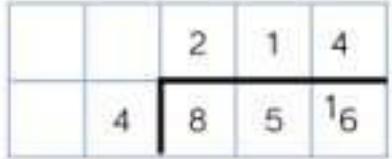

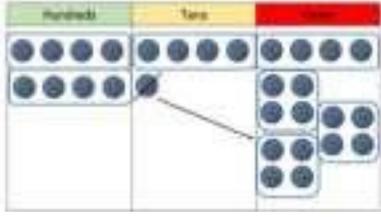

Children can continue to use place value counters to share 3-digit numbers into equal groups.  
 Children should start with the equipment outside the place value grid before sharing the hundreds, tens and ones equally between the rows.  
 This method can also help to highlight remainders.

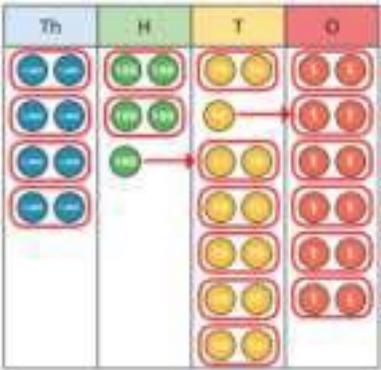

$$844 \div 4 = 211$$

Flexible partitioning in a part-whole method supports this method

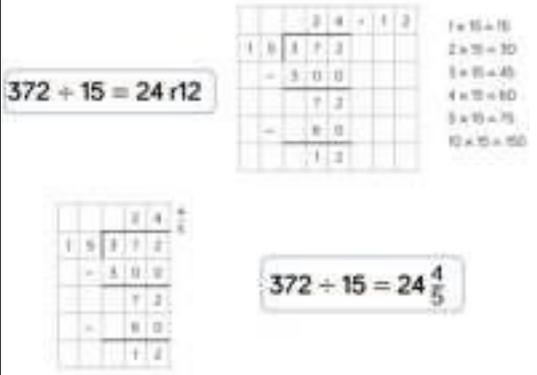

5	Divide 3-digits by 1-digit (grouping)	Place value counters Place value grid Written short division		Children can also draw their own counters and group them through a more pictorial method.	
---	---------------------------------------	--	--	---	---

			 <p data-bbox="781 799 1155 1029">Children can continue to use grouping to support their understanding of short division when dividing a 3-digit number by a 1-digit number.</p> <p data-bbox="781 1082 1155 1233">Place value counters or plain counters can be used on a place value grid to support their understanding.</p>		<div style="border: 1px solid black; border-radius: 15px; padding: 10px; display: inline-block;"> <math data-bbox="1630 523 2033 579">856 \div 4 = 214</math> </div>
--	--	--	---	--	--

<p>5</p>	<p>Divide 4-digits by 1-digit (grouping)</p>		 <p>Place value counters or plain counters can be used on a place value grid to support children to divide 4-digits by 1-digit</p>	<p>Children can also draw their own counters and group them through a more pictorial method.</p>	<div style="border: 1px solid black; border-radius: 10px; padding: 5px; display: inline-block; margin-bottom: 10px;"> <math>8,532 \div 2 = 4,266</math> </div> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td></td> <td>4</td> <td>2</td> <td>6</td> <td>6</td> </tr> <tr> <td>2</td> <td>8</td> <td>5</td> <td>13</td> <td>12</td> </tr> </table> <p>Children should be encouraged to move away from the concrete and pictorial when dividing numbers with multiple exchanges.</p>		4	2	6	6	2	8	5	13	12																																																						
	4	2	6	6																																																																	
2	8	5	13	12

:

					rounded as appropriate.
--	--	--	--	--	-------------------------

6	Divide multi-digits by 2-digits (long division)				 <p>When a remainder is left at the end of a calculation, children can either leave it as a remainder or convert it to a fraction.</p> <p>This will depend on the context of the question.</p> <p>Children can also answer questions where the quotient needs to be rounded according to the context.</p>
---	---	--	--	--	--

## Glossary

**Addend** - A number to be added to another.

**Aggregation** - combining two or more quantities or measures to find a total.

**Augmentation** - increasing a quantity or measure by another quantity.

**Commutative** - numbers can be added in any order.

**Complement** - in addition, a number and its complement make a total e.g. 300 is the complement to 700 to make 1,000

**Difference** - the numerical difference between two numbers is found by comparing the quantity in each group.

**Exchange** - Change a number or expression for another of an equal value.

**Minuend** - A quantity or number from which another is subtracted.

**Partitioning** - Splitting a number into its component parts.

**Reduction** - Subtraction as take away.

**Subitise** - Instantly recognise the number of objects in a small group without needing to count.

**Subtrahend** - A number to be subtracted from another.

**Sum** - The result of an addition.

**Total** - The aggregate or the sum found by addition.

# Glossary

**Array** – An ordered collection of counters, cubes or other item in rows and columns.

**Commutative** – Numbers can be multiplied in any order.

**Dividend** – In division, the number that is divided.

**Divisor** – In division, the number by which another is divided.

**Exchange** – Change a number or expression for another of an equal value.

**Factor** – A number that multiplies with another to make a product.

**Multiplicand** – In multiplication, a number to be multiplied by another.

**Partitioning** – Splitting a number into its component parts.

**Product** – The result of multiplying one number by another.

**Quotient** – The result of a division

**Remainder** – The amount left over after a division when the divisor is not a factor of the dividend.

**Scaling** – Enlarging or reducing a number by a given amount, called the scale factor
